Statement by Councilmember Nancy Dacek on Truck Traffic from the Gaithersburg Recycling Facility

"I am happy to announce that we will soon remedy much of the problem caused by truck traffic from the Gaithersburg Recycling Facility that now runs through Montgomery Village via Centerway.

"I have worked with the County Department of Public Works and Transportation to resurface the small bridge on Snouffer's School Road just south of the entrance to the Recycling Facility.

"Once that resurfacing and deck replacement, at a cost of \$200,000, is completed in late August, the weight restrictions will come off and the trucks can use that more direct route rather than detour to cut through the heart of Montgomery Village.

"This is great news to Montgomery Village residents who are sick and tired of the noise and traffic from most of the 150 trucks that use the facility. I will further work with the company to insure the trucks have a dedicated haul route to make sure our residential areas aren't impacted by any future changes."
